To whom it may concern:

Regarding your inquiry about the usage of E10 fuel.

All model vehicles produced by GM in North America, equipped with a gasoline engine, oxygen sensor, and calibrated for US federal or European emissions can be fueled with gasoline containing up to 10 volume % ethanol (E10). Consult your Owner's Manual to select the appropriate Octane Grade.

If the vehicle has not been modified nor altered after production and the vehicle has been properly maintained as recommended by the manufacturer no malfunctions are expected and the remaining warranty coverage will not be affected.

GM as a manufacturer assumes no risk for malfunctions and/or damage caused by the usage of alternative fuels other than those stated above.
